CURRICULUM VITAE

Bradley Barbrook

Barnstaple, Devon GitHub (https://github.com/BradDoesCode)
LinkedIn (https://www.linkedin.com/in/brad-barbrook-89896829a)

PROFESSIONAL PROFILE

I build software with AI coding agents, inside a structured engineering process where people make the design decisions and review what ships. The aim is speed without compromise on quality.

I'm part of the team building Pollards' new internal platform, and I work across the stack, from customer-facing apps to internal tools. Before that I worked on the PHP backend of an established e-commerce print platform, with earlier experience in full-stack and Flutter mobile development.

TECHNICAL SKILLS

AI-ASSISTED ENGINEERING	Claude Code, AI-assisted development, Reviewing AI-written code
BACKEND	PHP, Yii Framework, Laravel, MySQL
FRONTEND	Vue.js, Livewire, HTML, CSS, JavaScript
MOBILE	Flutter, Dart
TOOLS & PLATFORMS	GitHub, Bitbucket, Firebase, Google Maps API
CONCEPTS	MVC, REST APIs, State Management (Riverpod), Performance Optimisation

EXPERIENCE

Software Developer

Pollards Print, Exeter · June 2025 – Present

Since April 2026 I've been part of the team building Pollards' new internal platform. It's still in development. We build it with AI coding agents (Claude Code) inside a structured engineering process, with people making the design decisions and reviewing what ships.

The work is split by area of the business. My area runs from prepress to the customer receiving their order, giving staff and customers a clearer view of where every job is. I've worked across the stack, on customer-facing apps such as the customer portal and on internal tools for customer service and the shop floor.

Before that, from June 2025, I maintained and improved the PHP backend of an established e-commerce print platform, working in Yii2 and Vue.js.

Software Developer

Digitwell Solutions, Devon · 2022 – 2025

I gained rounded experience building and maintaining applications and websites across multiple frameworks and environments. I designed and developed applications for iOS and Android, desktop applications, and full-stack projects, while collaborating closely with the founder and taking on a broad range of responsibilities to meet project goals. I learned full-stack development there, mainly in Laravel.

Flutter development became a key focus, learning the framework and Dart language from scratch. After researching and advocating for modern alternatives, I led the adoption of Flutter to replace a long-standing legacy platform, resulting in improved development speed and application performance. I worked extensively with state management, including Riverpod, to deliver a fully completed large-scale application.

Role originally undertaken as part of an apprenticeship programme (not completed). Responsibilities and output were equivalent to a junior-to-mid level software developer.

EARLIER EXPERIENCE

Various Technical & Leadership Roles

2012 – 2022

Including Apple Authorised Reseller (Dixons Travel) and Team Leader (Co-op). These roles developed strong customer communication, problem-solving, and leadership skills that continue to support my software development work.

EDUCATION

University of Hertfordshire

Foundation Degree – Graphic Design · 2008 – 2012

INTERESTS

- Building and experimenting with Flutter applications
- Gaming (competitive and cooperative)
- Camping, mountain biking, and outdoor activities
