PROFESSIONAL PROFILE

I'm the technical lead and only developer for one area of a new internal platform at Pollards Print, built with AI coding agents (Claude Code), with people making the design decisions and reviewing what ships. Before that I worked on the PHP backend of an established e-commerce print platform. Earlier, I built Laravel and Flutter apps at Digitwell Solutions.

TECHNICAL SKILLS

AI-ASSISTED ENGINEERING	Claude Code, Reviewing AI-written code
BACKEND	PHP, Yii Framework, Laravel, MySQL
FRONTEND	Vue.js, Angular, Livewire, HTML, CSS, JavaScript
MOBILE	Flutter, Dart
TOOLS & PLATFORMS	GitHub, Bitbucket, Firebase, Google Maps API
CONCEPTS	MVC, REST APIs, State Management (Riverpod), Performance Optimisation

EXPERIENCE

Software Developer, New Internal Platform

Pollards Print, Exeter · April 2026 – Present

Technical lead and only developer for my area, which runs from prepress to the customer receiving their order.

- Built job milestone tracking and alerts, so the right person hears when a job is stuck.
- Built a customer service dashboard, which is live: some of the team use it to see problems with jobs before the customer calls.
- Built the customer portal and the production pipelines, which are in testing.
- Built artwork handling from upload to proof, also in testing: customer upload, automatic file checks, proof generation and a connection to the preflight and proofing software the business uses.
- Work with around a dozen people from across the business, from customer service to prepress, production and senior leadership, on what to build.

Software Developer, E-commerce Platform

Pollards Print, Exeter · June 2025 – April 2026

Worked on the PHP backend of an established e-commerce print platform, in Yii2 and Vue.js.

- Cut about 400ms from every page load by removing some of the data each page loaded and speeding up how the rest was fetched.
- Refined workflows and interfaces, and improved page designs, so the platform was easier to use.
- Made small, steady changes to an established codebase, checking each one closely because clients use it to place orders.
- Learned Vue.js and Angular on the job, by working in them while maintaining the app, which used both side by side.

Software Developer

Digitwell Solutions, Devon · 2022 – 2025

- Built mobile apps for iOS and Android, desktop applications and full-stack projects, working closely with the founder.
- Learned full-stack development there, mainly in Laravel.
- Learned Flutter and Dart from scratch, researched modern alternatives to a long-standing legacy platform, made the case for Flutter and led the move to it. Development got faster and the apps performed better.
- Used Riverpod for state management in Flutter.
- Helped build Map Your Event, a large-scale Laravel application and the backend for the Find Your Event app.

I started the role as an apprentice; the apprenticeship wasn't completed. The work was at junior-to-mid level.

EARLIER EXPERIENCE

Retail and team-leading roles

2012 – 2022

Including Apple Authorised Reseller (Dixons Travel) and Team Leader (Co-op). I still use what I learned there about talking to customers and leading a team.

PROJECTS

Portfolio site · 2026

Built with Claude Code, with me choosing what to build and reviewing what came back. Every page scores 100 in all four Lighthouse categories, on mobile and desktop, and passes automated WCAG 2.2 AA accessibility checks in light and dark mode. The repo is public, including the rules and checks the agents work under.

Code on GitHub (https://github.com/BradDoesCode/braddoescode.github.io)

Runedex · 2025

A completion tracker for RuneScape: Dragonwilds, built on my own in Flutter for Android and iOS, from April to August 2025. It tracks quests and collectibles with a live completion percentage, and stores progress on the device with Riverpod and Hive. It got as far as being ready for closed testing on Google Play.

Code on GitHub (https://github.com/BradDoesCode/Rundex)

Find Your Event · 2024–2025

The attendee app for Map Your Event, an in-house start-up project at Digitwell Solutions. I built the Flutter mobile app, with event listings, an interactive site map, a personalised schedule, push notifications and QR code scanning, and helped build the Laravel backend. It never got the funding to reach the market, but it's still on the Play Store.

Play Store (https://play.google.com/store/apps/details?id=uk.co.myeenterprises.findyourevent&hl=en_GB)

FiveM roleplay server · 2022

A British-themed roleplay server for GTA V. I wrote its scripts in Lua and ran the community, which grew to more than 1,000 members. At its peak it was full at 64 players every night.

EDUCATION

University of Hertfordshire

Foundation Degree – Graphic Design · 2008 – 2012

INTERESTS

- Flutter apps
- Gaming
- Camping and mountain biking
